

## Industry Leadership

Solutions driven by experience and developed for real-world users.

Decades of imaging expertise is concentrated in eRAD RIS. eRAD is the information technology arm of RadNet, the largest imaging center owner-operator in the U.S. This makes us the only provider of medical imaging workflow solutions with genuine, user-side expertise. We know every aspect of radiology—directly—and we funnel that knowledge into product development, benefitting customers worldwide.

### Latest Certification

eRAD RIS is 2014 EHR-certified. The platform is ready with new workflows, worklists, and tools so that U.S. customers can be compliant once new reimbursement models are finalized.

### The Challenge

In 2010, RadNet began its search for a Radiology Information System. The system needed to be able to handle a multi-site enterprise staffing hundreds of radiologists—and one that was growing quickly. The company now has 300+ centers, 600 radiologists, and more than 7000 employees.

All centers needed to be on the same platform. As new sites were acquired, each with its own RIS, RadNet became familiar with a range of RIS vendors—and still lacked the right solution. No vendor stood out as the right fit, as one that could flex as the business expanded.

### The Answer

eRAD RIS was borne from that need. When one vendor consolidated operations overseas, eRAD hired its established RIS development team. The new team set out to create a platform that would leverage RadNet's operational efficiency—the clinical and business best practices it had refined over decades of experience.

### The Success

That running start—veteran software developers plus knowledgeable users—is why more than 500 sites around the world rely on eRAD. As one of the fastest growing IT companies in imaging, eRAD delivers real-world, radiology-centric solutions for imaging providers of every size.

At eRAD, we know radiology. And we keep the innovations coming.
